

Supplemental Figure 10. *C. burnetii* inhibition of mTORC1 triggers a noncanonical response by host cells. The table summarizes host cell responses linked to mTORC1 activation (green) or inhibition (red) when cultured in nutrient replete or deficient medium, or when infected with *C. burnetii*. Specific inhibition of mTORC1 by *C. burnetii* is predicted to promote pathogen replication within the lysosomal CCV.
