

Supplemental Figure 3. Infected HeLa cells exhibit reduced phosphorylation of 4E-BP1.

Immunoblot of lysates from uninfected or *C. burnetii*-infected HeLa cells incubated for 4, 24, or 72 h in complete (Comp), AA⁻, or Torin-1 medium probed with antibodies against phosphorylated 4E-BP1 Thr37/46 (p4E-BP1) or actin. Data are representative of three independent experiments.
