

**Supplemental Figure 8. *C. burnetii* infection triggers TFE3 translocation independent of T4BSS activity.** Quantitation of TFE3 subcellular localization in HeLa cells (A) or THP-1 macrophages (B) left uninfected (UI) or infected with wild-type *C. burnetii* (WT) or the  $\Delta dotA$  mutant for 72 h in complete medium. The plots depict the mean  $\pm$  standard deviation of the ratio of nuclear to cytoplasmic TFE3 signal detected in cells (N > 25). Data are representative of three independent experiments. Asterisks indicate statistical significance (\*\*\*)  $P < 0.001$ .
