

Figure S5: The RhII-VSV-G epitope tag does not alter C4-HSL production. Single colonies of WT RhII-VSV-G (MPK0698), RhIS Mut A-VSV-G (MPK0689), RhIS Mut A+B VSV-G (MPK0697) and the asRhIS-1-VSV-G (MPK0687) strains were grown for 24 h in 10 mL LB + 50mM MOPS in 50 mL flasks at 37°C with shaking. C4-HSL was measured as described in Fig 4B. Data are from three biological and two technical replicates for each strain and error bars are standard deviations.
