

Figure S6] *In vitro* acetyl-esterase activity of C-terminal OafA and OafB assessed by hydrolysis of pNitrophenyl acetate (pNPA). Solid line = Active protein, dashed line = Heat treated protein. Error bars = SEM, N=3. Some error bars are obscured by point markers. 'C-Long' constructs comprise the SGNH domain with full SGNH_{ext}, 'C-Short' constructs comprise the SGNH domain with fewer SGNH_{ext} residues to expose the SGNH domain active site. See Figure 1 for details of the C-terminal OafA and OafB constructs.
