

Supplemental Figure 3. SARS-CoV-2 RBD and full length S specific antibodies correlate with pseudoviruses neutralization. Anti-RBD IgG and IgM evaluated by ELISA (A, D) anti-S antibodies evaluated by flow cytometry (B, E) or anti-RBD IgA evaluated by ELISA (C, F) were plotted against the levels of neutralization (ID₅₀) of pseudoparticles bearing the SARS-CoV-2 S (A,B,C) or its D614G counterpart (D,E,F). Statistical analysis was performed using Spearman rank correlation tests.
