

Figure S2: Kinetics of substrate consumption and production, and growth of the strain in M9 medium supplemented with a 100% glucose, 80% glucose and 20% xylose mix, 60% glucose and 40% xylose mix, 40% glucose and 60% xylose mix, 80% glucose and 20% xylose mix or 100% xylose. The marked variations in biomass observed under OD 0.1 are due to the technical limits of the spectrophotometer.
