Figure S1

The figure shows the percentage of amino acids encoded by 'NNN' (black bars) and 'NNK' (grey bars) across various amino acids. The x-axis represents different amino acids, and the y-axis represents the percentage (%). The amino acids are labeled at the bottom of the x-axis, and the percentage values range from 0 to 10. The figure highlights the variation in encoding percentages for different amino acids between the two codon types.
