FIG S2 ATc has no impact on plasminogen activation, a measure of Pla activity. Wild-type, \( \Delta hfq \), or \( \Delta crp \) \textit{Y. pestis} bacteria were cultured in the presence of ATc or vehicle and plg activation was measured as described for Fig. 2C. The \( \Delta pla \) strain of \textit{Y. pestis} is shown as a control for Pla activity.
