

1
 2 **Fig. S2. Substrates specificity screening of AC2a outer membrane enzymes.** Substrate
 3 specificities of the GH5 and GH9 enzymes were determined by AZCL substrate screening.
 4 Values are reported as relative absorbance calculated against the activity of the respective
 5 positive control enzymes at 1 U/ml (for the controls the absorbance value was set to 1.0). An
 6 overview of which enzymes were used as positive controls for the various substrates in the
 7 substrate specificity screens is provided in **Table S3**.
