

Supplementary Figure 1: blinded repeats of the killing curves. X-axis: antibiotic concentration (µg/ml). Blue columns: no herbicide, orange columns: herbicide present. Herbicide concentrations used: Kamba: 1830 ppm/1950 ppm (*E. coli*/*S. Typhimurium*); 2,4-D: 1830 ppm/1950 ppm, Roundup: 1240 ppm/1240 ppm. Data represent the average of two independent experiments conducted in duplicate.
