

Figure S2. Phylogenetic Tree of non-redundant Bacteroidetes MACPF proteins

Phylogenetic tree of the MACPF domain proteins in Bacteroidetes species. BSAP-1 and BSAP-2 are highlighted in yellow. Only one protein is listed for each orthologous protein clustering at 99% similarity. Cluster number correlates with the list of strains/proteins in that cluster listed in Table S2. The number following the “+” designates how many other proteins fall into that cluster.
