

**Fig. S3. Fibrinogen does not bind to plasminogen.** (A) Plg was immobilized on microtiter wells and tested for binding to Fg. Bound Fg was detected with anti-Fg mouse IgG followed by HRP-conjugated rabbit anti-mouse IgG. Data from three independent experiments are shown. (B) Adhesion force histogram and force profiles obtained in PBS between a Plg-tip and a Fg-substrate. Similar data were obtained in triplicate experiments.
